

Required Tools for Combat Archery Inspection

Rules Binder

Three ring binder or digital device containing -

- A copy of the most recent Middle Kingdom Combat Archery Handbook.
- A copy of the most recent Middle Kingdom Armored Combat Handbook.
- A copy of the authorization test questions and answers.

NOTE- If using a digital device, these items must be in a digital format that can be viewed without an internet connection.

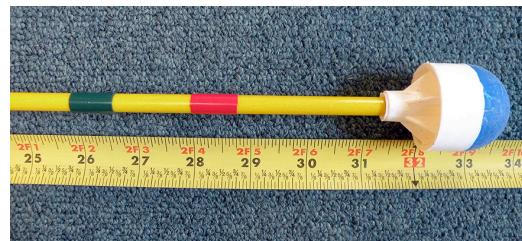

Bow Scale

There are presently three main manufacturers of bow scales. Out of the three, the **Tru-Weight Bow Scale** from Feather River Sports is a much better scale. This is because of the Non-Slip Hook design that helps hold the arrow to the string while testing the poundage. The other two types of scale needed modifying to allow a fatter bow string to go into the hook.

Bow Draw Length Gauge

On this shaft you will mark two lengths with tape. One is for 26 inches and the other is 28 inches. These measurements are from where the string goes into the nock down the shaft towards the head.

Required Tools for Combat Archery Inspection

Tip Diameter Gauge

This gauge is nothing more than a 1 1/2 inch hole in something. The one pictured below does just that. This gauge checks the heads on combat archery ammo to ensure that it doesn't go through the hole.

This pocket gauge is my design and free to copy as long as you don't make money on it other than material cost.

Measuring Device

Any measuring tool that can measure up to 28" is fine. This shows a small tape measure.

Combat Archery Marshal Heraldry

A Belt Favor or Tabard should be worn when serving as a Combat Archery Marshal

("Sable, in saltire, an arrow and a sword, Or.")
